

## // MULTI-DOMAIN SSL CERTIFICATES

### Problem:

How to protect multiple domains names in an easy & inexpensive way?

Choose Multi-Domain SSL Certificates

### Solution:

**ONE**  
**Multi-domain**  
certificate can be used to secure:

<https://secure.website.com>  
<https://secure.website.co.uk>  
<https://www.website.com>  
<https://login.web.com>  
<https://any-domain.any-tld>  
<https://...>

Multi-Domain SSL Certificate allows you to secure up to 210 domains on a single SSL certificate.

M O R E   D O M A I N S   —   M O R E   S A V I N G S

#### Advantages:

Cost savings verse individual certificate purchases  
Simplifies certificate management by allowing you to use one SSL certificate for multiple URLs  
Single SSL certificate for multiple domains with a unified expiration date

#### Unlimited server license:

Some MDCs (e.g. Comodo) come with free unlimited server licensing. This allows you to use your certificate on Multiple Domains that are being hosted on different servers.

MDCs even allow you to specify wildcard SSL on multiple domains.

(Wildcard protects only the first level subdomains. Option available for DV and OV certificates issued by Comodo and DomySSL.)
